Object Details

The following summary tables includes basic information about the hazard for this object. The maximum Torino and Palermo Scale values are listed, as well as the number of tabulated potential impacts and their corresponding cumulative Palermo Scale value and cumulative impact probability (shown in the the first table). Certain parameter values depend upon the specific impact event in question, but they change little among the various table entries. For this reason we tabulate only mean values for these parameters (shown in the second table). The observation set used for the analysis is also listed.

2017 SQ2 -- Earth Impact Risk Summary [\(orbit details ↗\)](#)

Torino Scale (maximum)	0
Palermo Scale (maximum)	-7.45
Palermo Scale (cumulative)	-7.45
Impact Probability (cumulative)	1.6e-7
Number of Potential Impacts	1
Impact Search Technique	LOV

V _{impact}	14.82 km/s
V _{infinity}	9.76 km/s
H	25.9
Diameter	0.023 km
Mass	1.6e+7 kg
Energy	4.1e-1 Mt
All above are mean values weighted by impact probability	

Analysis based on 36 observations spanning 12.948 days
(2017-Sep-18.34652 to 2017-Oct-01.294389)
